Dear Sir/Madam

### Griffins Find Project DIAMOND DRILL RESULTS (Hampton option to acquire 100%)

Hampton recently completed 7 diamond drill holes totaling 945 metres at the Griffins Find Project. Whilst the Company did not submit samples from all holes for assay and has not yet received all results, it has received encouragement from one hole.

Between 1983 and 1990, Otter Exploration NL produced about 57,000 ounces of gold from the Griffins Find and the smaller Griffins Find North opencuts at an average head grade of 2.8 grams per tonne gold. Open cut mining reached a maximum depth of 50 metres in the main Griffins Find opencut.

Hampton drilled two holes to test continuation of ore grade mineralisation beneath the main open pit while the remaining five holes tested airborne EM targets and soil anomalies elsewhere on the project. A significant gold intersection has been made in one hole about 25 metres down plunge of gold mineralisation already outlined by previous drilling beneath the open cut. **This hole returned an estimated true width of 18.4 metres averaging 4.9 grams per tonne gold** (using uncut assays).

The accompanying plan shows the location of this hole in relation to the old workings and the intersections made by Otter Exploration NL drilling beneath the ultimate level of the open pit. The next phase of testing will involve downhole EM surveying and 4 diamond holes in 20 to 40 metre step-outs to provide a better understanding of the geological controls to the mineralisation and the potential for significant extensions.

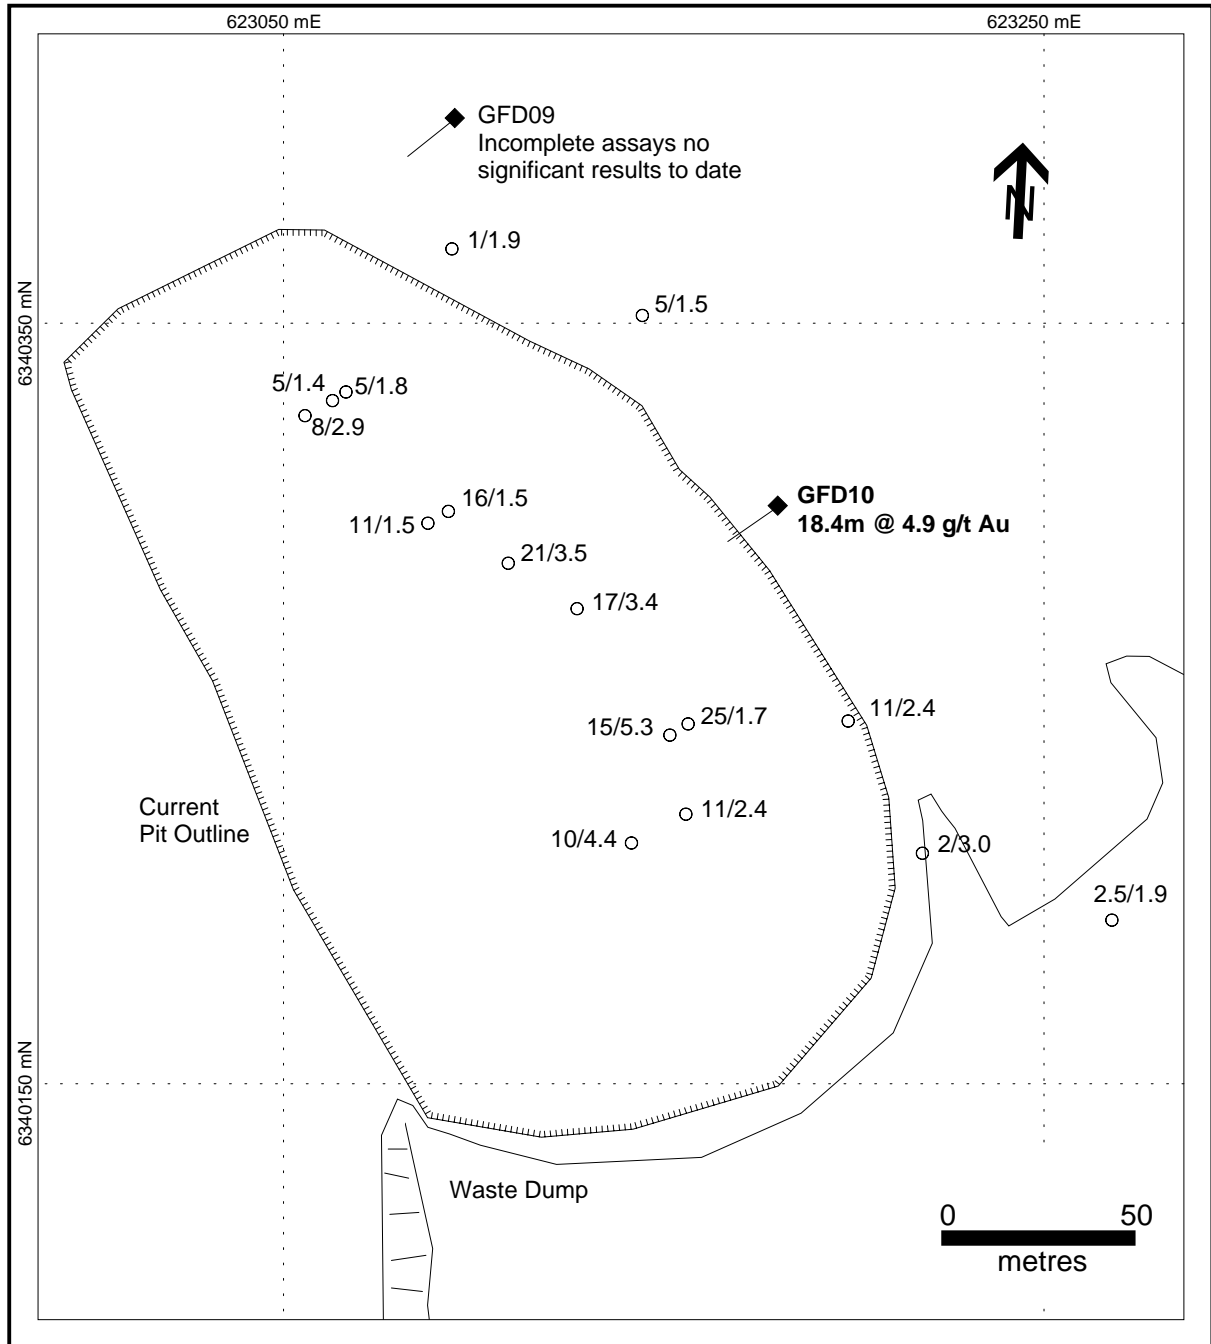

Yours faithfully,

**Wilson Forte**  
Managing Director
